

Representative 50-site network

11.5× the value
of a YMS alone.

11.5× <1_{mo}

VALUE MULTIPLIER

PAYBACK, HARD SAVINGS ONLY

v2 Archetype Network ROI model · 50 yards, 25 with a YMS today, 35 drop-capable · \$1,000 margin per shipment · mirrors yardflow.ai/roi

Site vs network

A YMS earns at 25 yards. YardFlow earns at all 50.

A traditional YMS at your biggest yards captures spotter efficiency and detention. YardFlow adds labor, throughput, and standardization, at every archetype of yard.

YMS at the 25 biggest yards

\$7.6M/yr

$\$87.4\text{M} \div \$7.6\text{M} = 11.5\times$ · same network, same freight, different operating layer

The floor · hard savings

\$6.5M a year before you count a single extra load.

- ✓ Paper. BOLs, gate logs, and yard checks go digital. We eliminate the clipboard.
- ✓ Labor. Gate, clerk, and spotter hours come back to the operation.
- ✓ Detention. Timestamped custody ends the disputes you have been paying to lose.
- ✓ Standardization. One protocol at all of your yards. One audit. One playbook.

Hard savings alone repay the \$125K one-time implementation inside the first month. Margin-independent. Finance can audit every line.

The upside · throughput

The throughput upside alone is 10× everything a YMS delivers.

A YMS does not even have this category. Faster turns push more loads through the same doors with the same people, valued at \$1,000 margin per shipment. It scales with your margin, not our pricing.

Legacy YMS, its entire value, every category

\$7.6M/yr

$\$80.9\text{M} \div \$7.6\text{M} = 10.6\times$ · and that is before YardFlow's own \$6.5M hard-savings floor · v2 Archetype Network ROI model

Cost of inaction

Every month you
wait, the variance
tax collects.

\$7.3M

PER MONTH, UNRECOVERED

That is the representative network's full annual value,
divided by twelve. It does not accrue. It walks.

Your network, your assumptions

Run it with your numbers.

The live model takes four inputs: facilities, yards with a YMS today, drop-capable yards, and margin per shipment. It returns the multiplier, the floor, and the payback. Exportable for finance.
