

Scoped pilot · one representative site cluster

Prove it on your yards before you scale it.

We do not deal in projected savings. We deal in
Ground Source Truth. A 90-day pilot puts measured
numbers behind every claim in the network model.

Scope

Three yards. One of each archetype.

The pilot cluster mirrors the network model, so pilot actuals map straight onto the rollout case.

A One YMS yard

Your busiest archetype. Tests the upgrade path from a two-category YMS.

B One drop yard without a YMS

Tests first-system value: custody, detention, trailer-pool visibility.

C One no-drop yard

Tests the conversion: live unload to drop and hook, 9-to-5 to 24/7.

Deployment

What we stand up at each yard.

- ✓ flowDRIVER. Digital check-in before the driver reaches the gate. FreightRoll ID, QR, wallet pass.
- ✓ flowBOL. Touchless BOL with an immutable timestamp trail. Kiosk prints two BOL copies and a yard pass.
- ✓ flowSPOTTER. Move queue, dispatch, and completion. The radio retires.
- ✓ flowNETWORK. Cross-site view of all three pilot yards from day one.

No rip-and-replace · existing YMS and WMS integrations stay in place during the pilot

Ground Source Truth

Success is measured, not promised.

METRIC	BASELINE	TARGET
Cycle time Gate-to-gate, drop and hook	48:00	24:00
Detention Disputed with timestamped custody	Days 0–14 capture	Every invoice
Reclaimed labor Gate, clerk, spotter hours / yard / week	Days 0–14 capture	Weekly readout

Every metric reads from gate timestamps, not estimates · cycle-time target from the Primo pilot

Timeline

We deploy in 90 days.

1 Audit + baseline

DAYS 0–14

Map the three yards. Capture baseline cycle time, detention, and labor from your own records.

2 Stand-up

DAYS 15–45

Kiosks in, integrations live, drivers onboarded. First digital BOL inside week three.

3 Measured operation

DAYS 46–90

Full protocol running. Weekly readouts against the three success metrics.

The path from pilot to network

From three yards to all of them.

Day 90 ends with your numbers in the model,
not ours.

- Pilot actuals replace the assumptions in the v2 Archetype Network ROI model.
- Finance gets a board-ready ROI built on measured cycle time, detention, and labor.
- Operations gets a rollout sequence by archetype: which yards convert first, and why.

One clear next step

Book a yard audit.

Thirty minutes. We map your facilities to archetypes,
pick the three pilot yards, and set the baseline plan.
You decide after that.
